

CargoSoft eForwarding – Online portal for quotes, bookings and tracking

eForwarding opens the door to online forwarding!

The online platform enables logistics providers to offer their clients and prospective customers a price-based online booking portal – even for complex transports with multiple carriers.

Characteristics we would like to particularly emphasize are the fast cost calculation for individually combined transports (sea – air – road – courier – rail) and the effortless data entry.

By entering the planned transport routes and shipment details, users immediately receive suitable quotes.

eForwarding automatically sends a confirmation to the client and contractor via email as soon as the booking has been completed.

Authenticated users can access the dashboard with all transacted quote requests and bookings. The current status of all booked shipments is available in the tracking feature.

Operators of the CargoSoft eForwarding portal are in control of and have access to all transacted quote requests and bookings. All information is saved and can be viewed and assessed at any time.

The option to integrate your corporate identity (colours, graphics, fonts, etc.) even adds to the value of the professional and visually appealing online presence of eForwarding.

eForwarding consists of the three CargoSoft modules ECM Rate Management (Enterprise Condition Management), eBooking and eTracking.

Bookings issued in eForwarding are automatically made available in TMS through the CargoSoft Booking Monitor. The order is subsequently invoiced in TMS based on the conditions determined in the portal.

Die CargoSoft GmbH ist ein Unternehmen der DAKOSY AG.
