

CargoSoft Lager – modern warehouse management with eWarehouse convenience

The software package CargoSoft Lager features an efficient, autonomous warehouse management system that manages and monitors all warehouse logistics processes – from receipt of goods, to complete warehouse management, shipping and communication with the customer. All warehouse orders can be processed professionally, quickly and transparently with this software.

In the development of the CargoSoft solution for warehouse management, the requirements of forwarding companies, service providers specializing in transshipment and export/import businesses were analysed and taken into account. The result is a simple and convenient to operate software package with extensive fields of application.

Using the additional eWarehouse customers are integrated directly into the warehouse processes. The customer thus always has access to his current warehouse inventories. The individually designed views of the warehouses and the inventories can be configured freely for each customer and for the logistician. The warehouse becomes an eWarehouse.

An ergonomically developed software, CargoSoft Lager provides optimal support for communication between the supplier and the customer. With clear displays of movements and inventory and with the option of advising deliveries and collections directly on-line, you will notice the simplification of the processes. Essential aspects of notification are automated and hence become transparent. The actual time and effort of the staff is notably reduced – and this is possible with increased convenience.

The advantages of CargoSoft Lager at a glance

- Noticeable reduction of time and effort in inventory management
- Warehouse billing at the touch of a button
- Integrated electronic bonded warehouse
- Customer loyalty by involving the customer
 - » current inventory overviews for your customers at all times
 - » correct warehouse invoices
- Options for evaluating types of services
- Profitability analyses
- Option of direct data transfer to courier, express and package services
- Order management for land transport using FORTRAS

Brand new! Version 6
The latest version of CargoSoft Lager including new features, such as a translation module, automated distribution business and container scheduling

The most important functions of CargoSoft Lager:

- Master data (e.g., article no./ description, trading units, carrier, dimensions, hazardous goods and customs data, individual data fields)
- Storage position management, e.g., for high shelf and block storage warehouses
- Storage position control: stocking, stock removal and stock transfer operations
- Stock rotation and inventory analyses, statistics on warehouse history and warehouse inventory, project reports
- Barcode/scanning
- Batch tracing
- Transport units & shipping unit no.
- Project management
- Bonded warehouse
- Automatic warehouse billing using predefined conditions
- Account and profit reporting
- Shipping follow-up (forms, customs papers, freight papers)
- Translation module
- Automated distribution business
- Container scheduling

Never miss customs deadlines again

Missing deadlines for presentation of goods to customs is irritating and expensive. CargoSoft Lager automatically generates a message before deadlines expire.

The advance period for message timing can be freely configured by each user (x hours or x days before deadline expiration). Breach of obligations and the associated cost are thus kept to a minimum.

CargoSoft Lager as an independent solution or as integrated solution in CargoSoft TMS

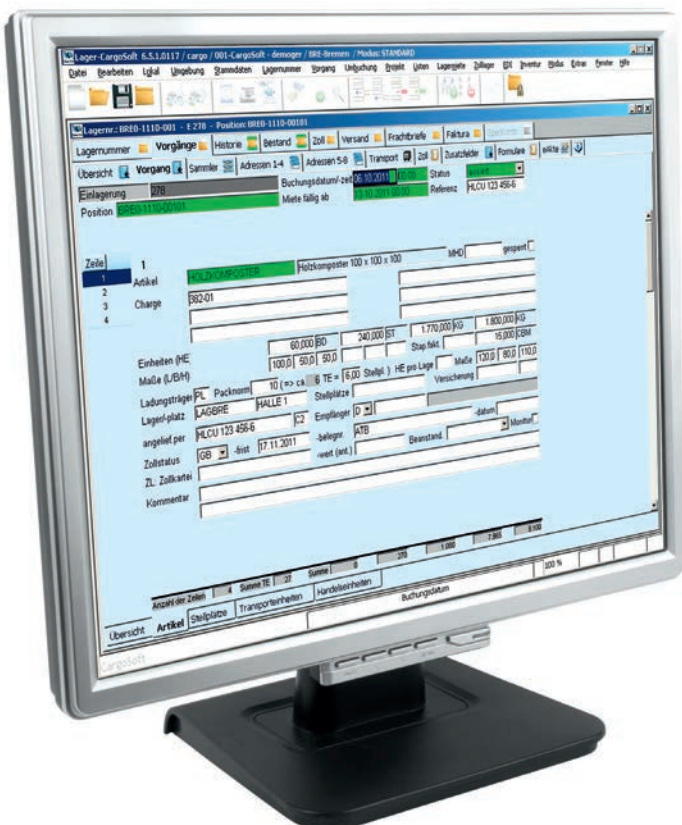

CargoSoft Lager is available as a stand-alone solution for warehouse management including eWarehouse. Users who already employ the transport management system from CargoSoft will enjoy a completely integrated solution with the expansion to CargoSoft Lager. Once data have been collected they are of course available in the whole CargoSoft application – even for evaluations, statistics, analyses, etc., with the CargoSoft Management-Information System.

Additional CargoSoft tools can also be integrated into the stand-alone solution at all times. Here are the most important modules at a glance:

- Accounting: integration of the financial bookkeeping program for automatic data exchange
- EDI: the integration of CargoCom provides quick and transparent data communication.
- Compliance: the CargoSoft Compliance Solution in accordance with the current safety regulations can also be integrated
- eAkte: for access to all documents.
- CRM (Customer Relation Management): a customer information system developed especially for logisticians
- CargoSoft GLA (Global Logistic Access): the integration of all partners involved in the supply chain spanning the institutions and companies for a completely transparent solution – from the product order to the final customer. Everyone can follow the supply process live.

Lease or buy?

We offer CargoSoft Lager either on a lease basis (ASP) or as an in-house installation – in this manner the most profitable and most effective solution can be found for each company layout and size.
