

CargoSoft GmbH – Logistic Software and Consulting from Experts for Experts

The Business

CargoSoft GmbH creates logistic information systems with global reach for our customers. A subsidiary of the Hamburg-based DAKOSY AG since 2007, CargoSoft is considered to be a leading supplier of transport management solutions for international shipping and industrial businesses.

With more than fifty employees, our business offers forward-looking solutions from a single source from its premises at the Technology Park University in Bremen. The central asset of its portfolio is the internationally successful eLogistic sector solution CargoSoft TMS, which is already in use at more than four hundred businesses on all five continents. This success is based primarily on the fact that CargoSoft TMS is consistently geared to the complex necessities of the transport sector.

In 2009, due to the strong demand on the international market, CargoSoft GmbH opened another branch office in Singapore. The continual growth of the business demonstrates one thing above all: that CargoSoft rises to meet new challenges dynamically and continues to develop its solutions and services consistently with an eye to the sector's future challenges. Hence our customers always benefit from individual, forward-looking solutions that are tailored exactly to their needs.

Consulting, advising organizations, and project planning

Modern software architecture combined with customer-focussed services: we always offer our customers complete solutions. And with this comes enthusiastic and comprehensive service from consulting to project planning and execution, and to training and support. In this manner we ensure that all processes are optimally configured and geared to one another. While our customers can concentrate on their core competences, we take care that everything runs smoothly – directly on site or by way of our remote service. Moreover, we offer CargoSoft TMS also on the lease model “Software as a Service” – a convenient option that is currently seeing increasing rates of use.

Our central software solutions

CargoSoft TMS

The Transport Management System (TMS) from CargoSoft is an efficient, user-friendly software package – and the optimal tool for the complex daily challenges in transport and logistics. Its modular construction lets CargoSoft TMS adapt exactly to individual requirements – even retrospectively, if necessary. Additional CargoSoft modules can always be incorporated to expand the basic application.

CargoSoft GLA

CargoSoft Global Logistic Access (GLA) visualizes the phases of the logistics chain for all participating partners – transparently and in real time within a unified system.

CargoSoft CRM

CargoSoft CRM enables a systematic presentation across all departments and even branch offices, and management of all customer-related data from sales, rates/offers, outstanding items/dunning and project management.
